## Baby Blues™ Distortion / Boost

Thank you for purchasing the Rockbox™ Baby Blues™ Distortion / Boost. We have spent hours listening and fine-tuning this pedal to bring you a diverse range of tasty vintage distortion/boost tones in one effect, with features that give you a wide range of settings for maximum versatility. This is a true-bypass pedal. the circuit is bypassed and the signal passes directly from input to output when the pedal is switched off.

**Note: This pedal is capable of producing a lot of gain! It is possible to send your amp into oscillation, blow speakers, etc. with some settings. Be sure to lower the gain on the pedal AND your amp before connection.**

Gain - Sets the overall volume. Use this to match volume or give a boosted output when the pedal is selected.

Drive - Sets the amount of distortion, or boost in clean boost mode.

Tone - Use the tone control to set the treble / bass ratio.

Boost - Select the IN position for a boosted sound. OUT position is the normal setting.

Treble Boost - Select the IN position for a boosted sound. OUT position is the normal setting.

The amount of Treble Boost can be controlled by the variable resistor inside shown here →

Drive 1 & 2 Select -

IN position - Selected Drive is on.

OUT position - Selected Drive is off.

Treble Boost  
Variable Resistor  
Clockwise = More  
Counter-Clockwise = Less

**WARNING! EACH DRIVE SELECTION HAS A DIFFERENT OUTPUT VOLUME!  
TURN THE GAIN DOWN BEFORE CHANGING THE DRIVE / BOOST SETTINGS!**

A/C Adapter - Uses standard 2.1 x 5.5mm **Center Negative Polarity** 9v adapter, such as a Boss. Using an A/C Adapter bypasses the supplied internal 9V battery. Be sure to check the internal battery regularly for leakage.

**WARNING! SUPPLYING IMPROPER VOLTAGE OR POLARITY CAN DAMAGE THE UNIT!  
DAMAGE TO UNIT DUE TO IMPROPER POWER SUPPLY IS NOT COVERED UNDER WARRANTY!**

This product is warranted against manufacturers defects in workmanship and materials to the original purchaser for a period of two years from the date of purchase. Failure due to the following will void the warranty: Rockbox is not responsible for failure due to modifications, abuse, incorrect power supply or repairs done by others. Warranty repairs are performed at Rockbox. Purchaser is responsible for shipping charges to Rockbox. Rockbox will repair or replace at its discretion.
