## MATADOR

PRE-AMP

Thank you for purchasing the Matador™ Preamp. The Matador™ is an inspiring tool for the working musician. Capable of everything from a huge clean boost to a smooth overdrive sound, the Matador can be dialed in for just the right sound for your rig. The Matador™ features an active boost and cut tone section, allowing precise tone-shaping to achieve your sound. When you want the Matador out of the mix, a silent, true-bypass switch allows your signal to be passed directly from input to output.

**Note: Always be sure to lower the gain on the pedal AND your amp before connection.**

Gain - Sets the overall volume. Use this to match volume or give a boosted output when the pedal is selected.

Drive - Sets the amount of available distortion.

Treble, Bass - Provides  $\pm 15$ dB to shape your tone.

A/C Adapter - Uses standard 2.1 x 5.5mm **Center Negative Polarity** 9v adapter, such as a Boss. Using an A/C Adapter bypasses the supplied internal 9V battery. Be sure to check the internal battery regularly for leakage.

**WARNING! SUPPLYING IMPROPER VOLTAGE OR POLARITY CAN DAMAGE THE UNIT! DAMAGE TO UNIT DUE TO IMPROPER POWER SUPPLY IS NOT COVERED UNDER WARRANTY!**

This product is warrantied against manufacturers defects in workmanship and materials to the original purchaser for a period of two years from the date of purchase. Failure due to the following will void the warranty: Rockbox is not responsible for failure due to modifications, abuse, incorrect power supply or repairs done by others. Warranty repairs are performed at Rockbox. Purchaser is responsible for shipping charges to Rockbox. Rockbox will repair or replace at its discretion.
